 Superior Vision of New Jersey, Inc.
 Block Vision of Texas, Inc. d/b/a Superior Vision of Texas
 Davis Vision
 (Collectively referred to as 'Versant Health' or 'the Company')

ACRONYMS or DEFINITIONS

n/a

PURPOSE

To provide the medical necessity criteria to support the indication(s) for fundus photography. Applicable procedure codes are also defined.

POLICY
A. BACKGROUND

Fundus photography may be medically necessary when the information garnered from the eye exam is insufficient to assess the patient's disease. If the images are taken as baseline documentation of a healthy eye or as preventive medicine to screen for potential disease, then they may not be medically necessary, even if disease is identified.

Fundus photographs are not covered for screening, or to simply document the existence of a condition, or as a redundant test that does not provide any additional or needed information.

B. Medically Necessary

Fundus photography may be medically necessary for the following:

1. To plan or guide treatment such as laser photocoagulation,
2. To evaluate injuries, abnormalities, or disease in the fundus or choroid,
3. To monitor disease progression, including initial fundus photographs for a chronic condition that requires monitoring (e.g., glaucoma); such as,
 - a. Repeat fundus photography is necessitated by clinically significant disease progression, the advent of new disease, or planning for additional surgical treatment (e.g., laser).
 - b. Repeated photos of the same, unchanged condition are unwarranted. Fundus photography must provide actionable data that would influence the course of treatment and that would not be available from other testing or imaging modalities.
4. When a comprehensive eye exam requires a dilated fundus exam (DFE) and the DFE is medically contraindicated; the fundus photo can be used in lieu of a DFE;
5. Fundus photography must be ordered and used promptly by the physician who is treating the patient.

C. Not Medically Necessary

Fundus photography may not be medically necessary for the following:

1. To document normal or stable findings noted on the examination may not be medically necessary.
2. When the image merely confirms the findings of other imaging modalities;
3. For screening purposes;
4. When used as a baseline photo to document a condition that is static and does not require future treatment (e.g., scar);
5. To document the existence of a condition;
6. In the absence of a disease or abnormality within the fundus.
7. When a comprehensive eye exam requires a dilated fundus exam (DFE), a fundus photo cannot be used in lieu of a DFE, unless the DFE is medically contraindicated,

D. Documentation

Medical necessity is supported by adequate and complete documentation in the medical record that describes the procedure and the medical rationale for it, plus documentation of as follows. If a subsequent medical review audit is necessary, these items must be available to initiate or sustain payments. For retrospective reviews, the complete operative report and medical care plan are required.

Every page of the record must be legible and include appropriate patient identification information (e.g., complete name, date(s) of service). The medical record must contain copies of the photographs or digital images and be available upon request. Services provided/ordered must be authenticated by the author with a handwritten or electronic signature. Stamped signatures are not acceptable.

1. Fundus photography (FP) requires “interpretation and report” which includes:
 - a. Physician’s order for FP with medical rationale
 - b. The medical record must contain copies of the photographs or digital images and be available upon request.
 - c. Date performed
 - d. Reliability and findings of the fundus photography. Do not bill a FP of dubious value or of normal findings.
 - e. Patient cooperation
 - f. Comparison of FPs (when applicable) – statement of variation between current and prior FPs
 - g. Assessment, diagnosis; when the indication for fundus photography is high risk medication monitoring
 - h. Impact on treatment and prognosis
 - i. Ideally, the interpretation of the fundus photography follows immediately after the technical component is finished. In practice, there may be a delay; only bill fundus photography after the interpretation and report is completed.
2. When a scanning laser ophthalmoscope is used to capture images of the fundus, proper coding depends on several factors.
 - a. If the scanner produces an image of the retina or optic nerve along with other data and imaging for quantitative analysis, report a single service from the appropriate scanning computerized ophthalmic diagnostic imaging code range (92133-92134).
 - b. If only an image is obtained, report code 92250
 - c. If the only necessary service provided is generating a fundus photograph without the need to quantify the nerve fiber layer and to analyze the data via a computer, then report code 92250, even if the photograph was taken with a scanning laser.
3. When fundus photography and extended ophthalmoscopy (CPT 92201 and 92202) are performed concurrently, the retinal drawing must identify severe posterior segment disease that is not identifiable in the image, otherwise there is unnecessary duplication and only one of these procedures may be considered medically necessary.
4. Auto fluorescent imaging is an incidental part of fundus photography and not a separate service.

E. Procedural Detail

CPT Codes	
92227	Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral
92228	Imaging of retina for detection or monitoring of disease; with remote physician or other qualified health care professional interpretation and report, unilateral or bilateral
92229	Imaging of retina for detection or monitoring of disease; point-of-care automated analysis and report, unilateral or bilateral
92250	Fundus photography with interpretation and report
92499	Unlisted ophthalmological procedures. To be used in uncommon circumstances for remote monitoring that does not fall within the description of 92227.

DISCLAIMER and COPYRIGHTS

This clinical policy is provided for information purposes only and does not constitute medical advice. Versant Health, Inc., and its affiliates (the “Company”) do not provide health care services and cannot guarantee any results or outcomes. Treating doctors are solely responsible for determining what services or treatments to provide to their patients. Patients (members) should always consult their doctor before making any decisions about medical care.

Subject to applicable law, compliance with this clinical policy is not a guarantee of coverage or payment. Coverage is based on the terms of an individual’s particular benefit plan document, which may not cover the service(s) or procedure(s) addressed in this clinical policy. The terms of the individual’s specific benefit plan are always determinative. Every effort has been made to ensure that the information in this clinical policy is accurate and complete, however the Company does not guarantee that there are no errors in this policy or that the display of this file on a website is without error. The company and its employees are not liable for any errors, omissions, or other inaccuracies in the information, product, or processes disclosed herein. Neither the Company nor the employees represent that use of such information, product, or processes will infringe on privately owned rights. In no event shall the Company be liable for direct, indirect, special, incidental, or consequential damages arising out of the use of such information, product, or process.

COMPANY’S COPYRIGHT STATEMENT

Except for any copyrights described below, this clinical policy is confidential and proprietary, and no part of this clinical policy may be copied without Versant Health or its applicable affiliates expressing prior written approval.
